

Some of our projects clients allowed us to show.

Not every engagement can go on a public site. These are the apps, websites, and systems we have permission to put here, with screens and the story of what shipped.

APPS

LOAD BOARD APP

ShipperDock

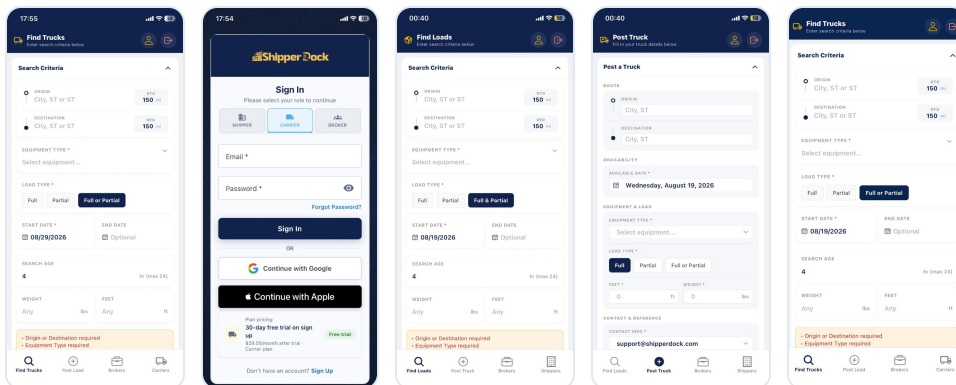

ShipperDock is a load board for the US freight market. Shippers, carriers, and brokers each sign in to the same network: post a load, post a truck, or search the other side.

The mobile apps are built for field work. Find trucks, find loads, and post equipment with origin, destination, deadhead radius, equipment type, and dates. Sign-in is email, Google, or Apple.

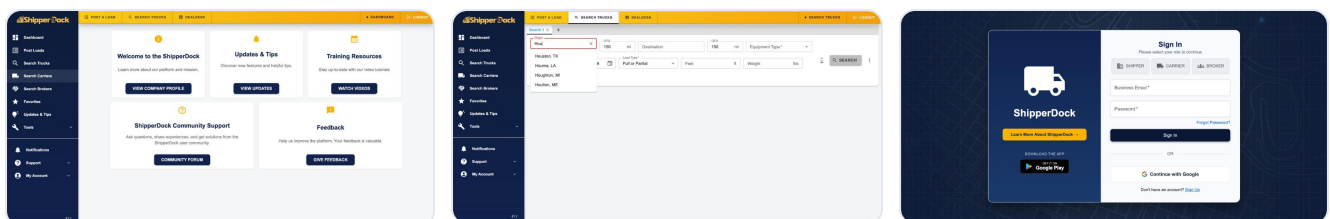

The desk web app is the same product on a browser: search trucks, search carriers and brokers, post loads, and a dashboard for training and support.

USA FUEL TAX REPORTING

TrackIFTA

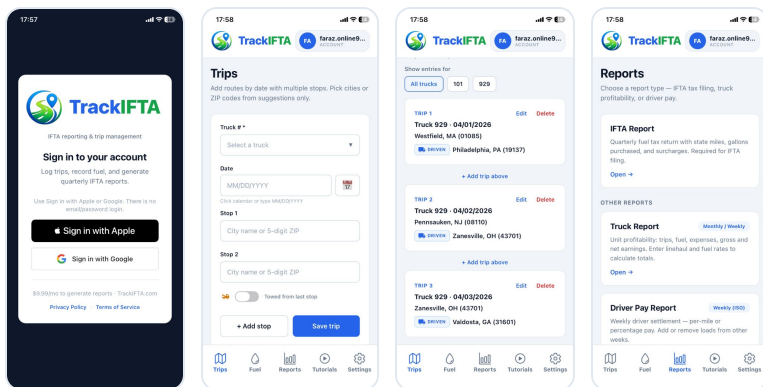

TrackIFTA is for US truckers who file IFTA. Drivers log trips and fuel. The software turns that into the quarterly return, plus truck profitability and driver pay.

On the phone, a driver adds a route by date with multiple stops (city or ZIP), marks if a trailer was towed, saves the trip, and later opens IFTA, truck, or driver-pay reports. Sign-in is Apple or Google.

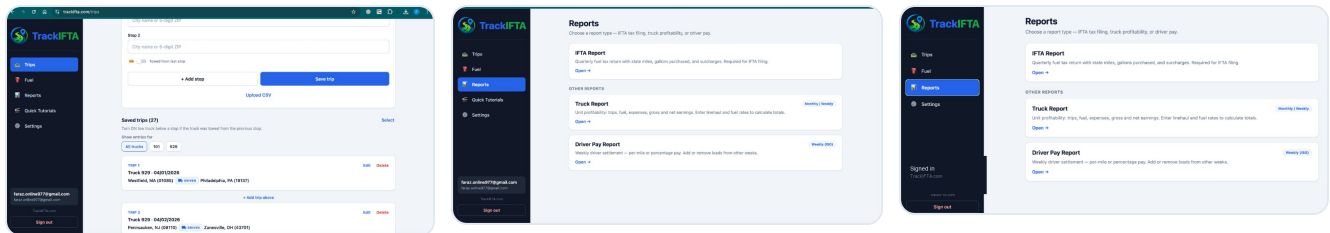

The same product runs on the web at trackifta.com: saved trips by truck, CSV upload, and IFTA, truck, and driver-pay reports.

WEB APP

TRUCKER NETWORK

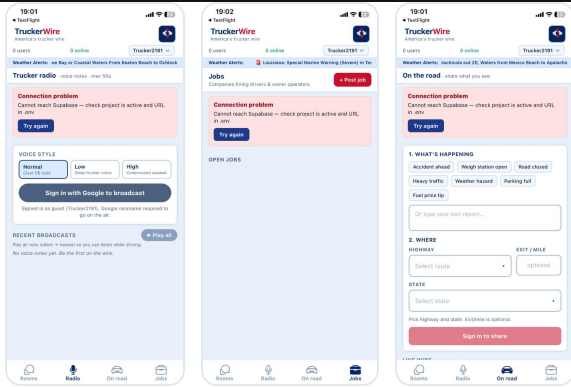

TruckerWire

TruckerWire is a mobile network for US truckers. Drivers share what they see on the road, join rooms, send CB-style voice notes, and browse companies hiring drivers and owner operators.

On the road reports cover accidents, weigh stations, closures, traffic, weather, parking, and fuel tips, with highway, state, and mile markers. Weather alerts sit at the top of the app.

iOS · Android

PHONE

PRIVATE APP FOR ONE FAMILY

Family Birds

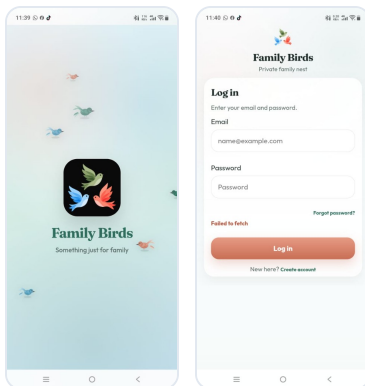

Family Birds was built for one family as their private app. Relatives share a closed nest. There is no public feed and no open signup.

The splash says the brief: something just for family. A private family nest. New people join only when someone already inside trusts them.

It runs on iPhone, Android, and the web. Memories stay in the nest.

PHONE

PAKISTAN TRUCKING MARKETPLACE

TruckStation

TruckStation is a Pakistan trucking marketplace. Carriers, shippers, and drivers each have an app. Search available trucks, share a live tracking link, and watch the fleet on a map.

Carriers manage equipment. Drivers share background GPS. Shippers search and book from the same network. Sign-in is phone OTP. There is a web admin panel for the operation.

WEBSITES AND WEB APPS

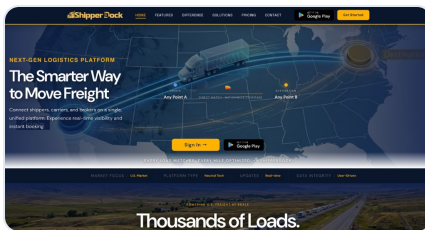

PRODUCT WEBSITE

ShipperDock.com

A separate website from the mobile app. It explains the US load board, the market, and how shippers, carriers, and brokers start.

Web · shipperdock.com

WEB APP

FBR DIGITAL INVOICING

BizBill.pk

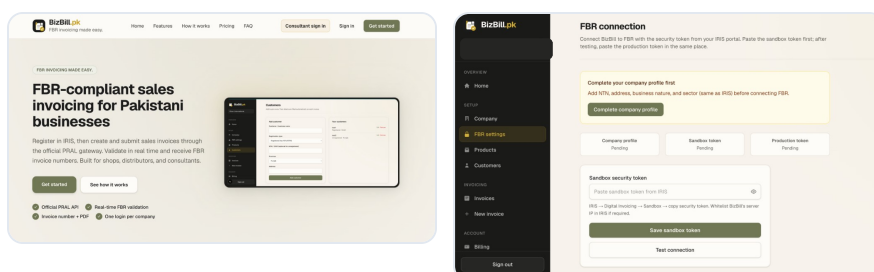

BizBill.pk is invoicing for shops, distributors, and consultants in Pakistan. A company registers in IRIS, then raises sales invoices in BizBill. The app validates in real time through the official PRAL gateway and returns an FBR invoice number plus a PDF.

Each business has one login for the whole office. The team keeps customers, products, and company profile in one place, then connects a sandbox token from IRIS before going live with a production token.

Day-to-day billing does not require the FBR portal. Official PRAL API, real-time FBR validation, invoice number and PDF, one login per company.

WEB APP

ACCOUNTING SYSTEM

Abdul Ghani Sons

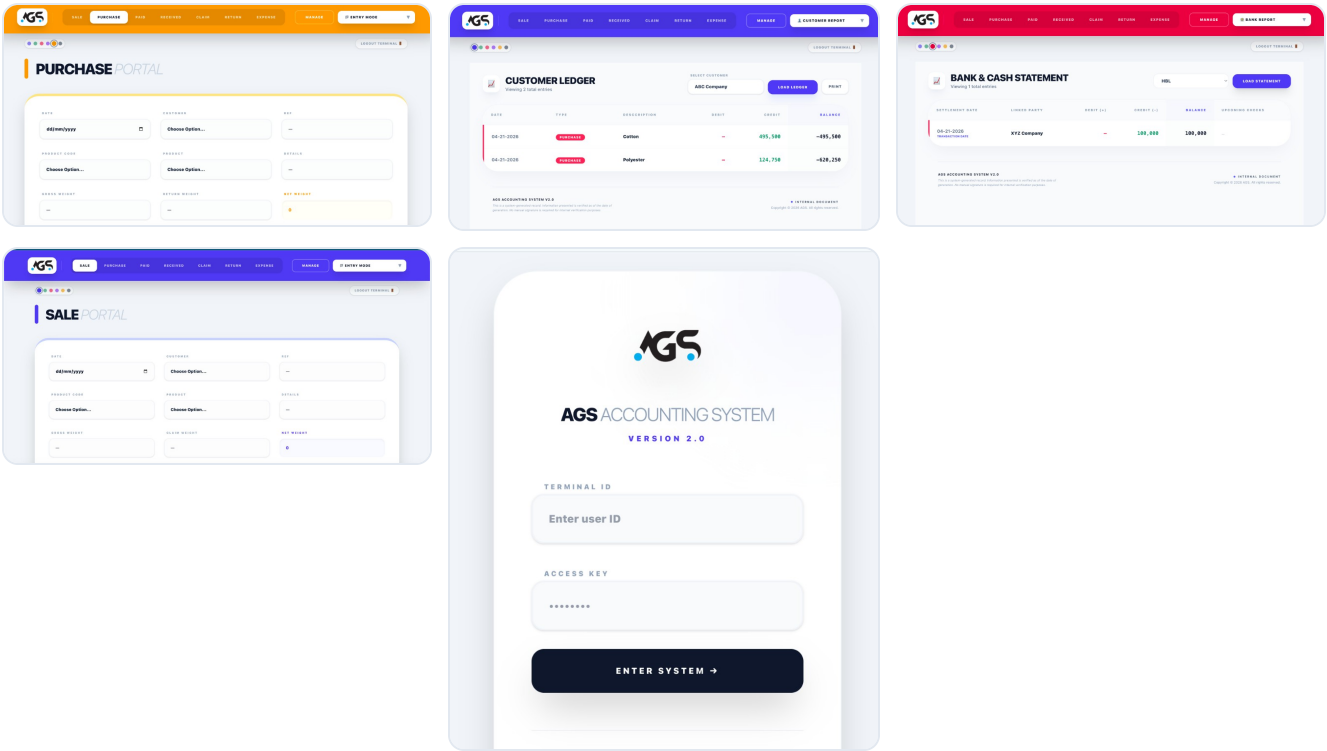

A daily system for Abdul Ghani Sons: sales and purchase entries, payments, claims, returns, expenses, customer ledgers, and inventory by weight.

The web app is a color-coded portal. Purchase is orange, the customer ledger is violet, bank and cash is red. Terminal sign-in keeps a station locked to one operator.

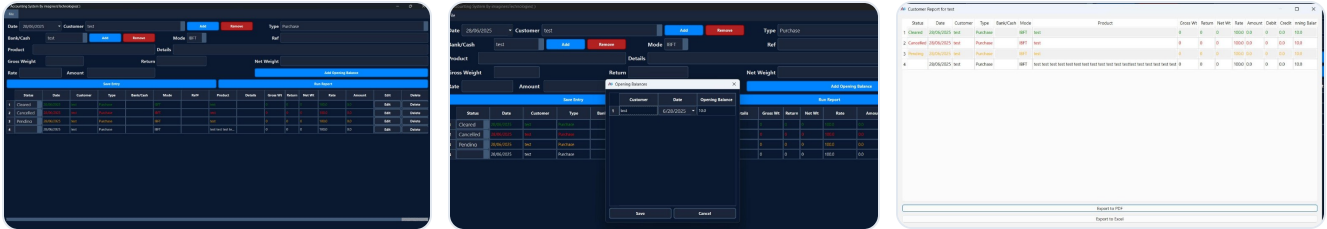

The desktop app is the same work at a desk: entries, opening balances, customer filters, and export to PDF or Excel.

FMCSA COMPLIANCE

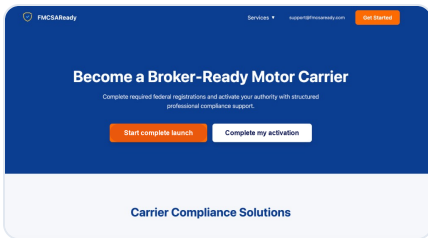

FMCSAReady

FMCSAReady helps new motor carriers become broker-ready. The site walks them through required federal registrations and authority activation with structured professional compliance support.

Services include DOT and MC authority filing assistance, BOC-3 process agent coordination, UCR registration assistance, drug and alcohol consortium coordination, Clearinghouse registration guidance, authority activation monitoring, and broker onboarding eligibility review.

DISPATCH COMPANY SITE

GTS Dispatch

We rebuilt the GTS Dispatch company site from WordPress onto Next.js so pages load fast and content is easy to keep current. It is the public marketing site for a US truck dispatch operation.

WEB APP

BROWSER VIDEO EDITOR

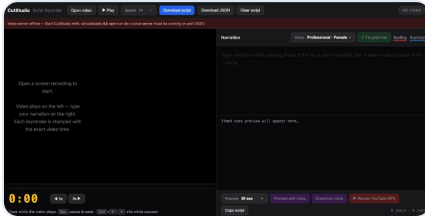

CutStudio

CutStudio records narration against a video with timestamps on every keystroke. It started as a tool for TrackIFTA demo videos and is now its own editor.

It runs in the browser.

EXPORT COMPANY WEBSITE

YZ Enterprises

YZ Enterprises needed a public website for international buyers: home textiles, apparel, and a path to request a quote.

We designed and built the site, the product catalog, and the inquiry inbox. The company owns the work.

Web · www.yzenterprisespk.com

WEB APP

EXPORT COMPANY WEBSITE

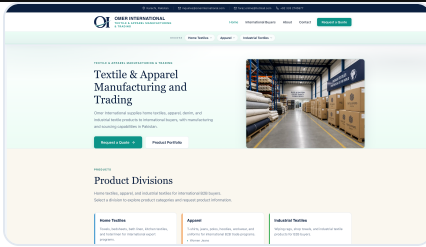

Omer International

Omer International is a buying house site we designed and built for international buyers. Home textiles, apparel, and industrial textiles sit on the public site.

Buyers can read the export process, open a division, and send a quote request. An admin keeps products and inquiries current. The company owns the repository.

Web · www.omerinternational.com

WEB APP

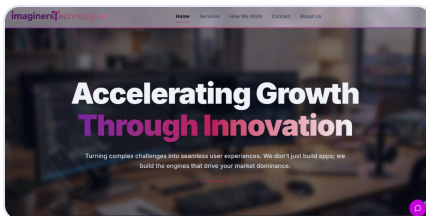

COMPANY SITE

Imaginers Technologies

A marketing site for a software studio. Home, services, how we work, contact, and about, with a live chat widget on the page.

Web

WEB APP

CLIENT CHATBOT

This chatbot is not an OI Digital's product. We designed and built it for a trading company, then handed the repo and the data over.

COMPANY CHATBOT

Meridian Assist

This is not an OI Digital's product. Meridian Assist is a company chatbot we designed, built, and sold to a trading firm. They needed visitors to ask about stock, deliveries, and invoices without waiting on a desk.

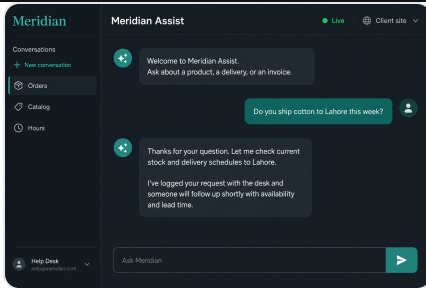

The bot lives on their site under their name. It is trained on their catalog and house rules. A question about a commodity, a city, or a due date becomes a short answer plus a row the desk can open later.

Staff get a private admin: conversations, order-intake rows, and the documents the bot is allowed to use. The visitor never sees that desk. The company never has to paste the same answer twice.

We shipped the chat UI, the source documents, the transcript log, and a handoff of the repo. The company owns the code and the data. The bubble on this OI Digital's site is a separate studio helper, not this product.

WEB APP

TOOLS

OUTBOUND MAIL

Email tool

A web panel sends personalized HTML through Gmail. A hosted engine runs sequences, tracks clicks, and keeps leads on a spreadsheet.

A desktop console can run several brands at once: templates, daily quotas, bounce checks, and SendGrid, Gmail, or Mailgun as the sender. Contacts come from Google Sheets.

Web · Desktop · Sheets

ECM

PUBLIC DATA COLLECTION

Scrapers

Browser scrapers open public freight and registry directories, collect the fields needed, and write a clean list into Google Sheets.

The toolkit is menu-driven, runs in a real browser, and can sit behind a sheet-triggered job. Those lists feed the email tool and other desk work. We do not publish client lists or sell scraped data.

Desktop · Sheets

Scrapers

LOAD-DESK THREADS

Messaging

The messaging system is the conversation layer next to a load board. Brokers and carriers open a thread on a specific load or posted truck, send messages, and pass a rate as an offer card that can be accepted or rejected.

The layout is a list of loads or trucks, company threads, and the chat. Unread counts sit in the header. Built so a desk can negotiate without leaving the product.

Web

Messaging

NUMBER CHECK

WhatsApp checker

A desk tool for outreach lists. It pulls numbers from Google Sheets, checks which accounts are on WhatsApp, and opens the Business chat so staff do not type each number by hand.

Built for volume work next to the email tool. The sheet stays the source of truth.

Android · Sheets

WhatsApp checker

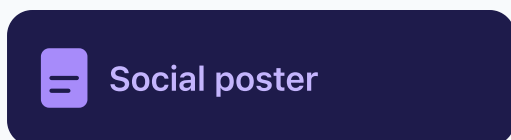

DESK POSTING

Social poster

A desk tool that opens saved Chrome profiles and posts into groups on Facebook, LinkedIn, and Instagram.

Used when a brand needs the same update in many rooms without pasting by hand each time.

Desktop

GOOGLE SHEETS MAILER

Auto Brand Mailer

Auto Brand Mailer is a Google Apps Script we wrote so outreach runs from a spreadsheet. One tab per brand, shared Templates, Config, and Log tabs. Paste contacts, save HTML, and the sheet sends on an hourly trigger during the day.

Mail goes out through a workspace inbox the market already trusts. No extra server to keep up. Each brand tab marks a row sent so the same person is not mailed twice.

Google Sheets · Gmail

Client repositories, admin panels, and customer data stay off this list. hello@oidigitals.net
